

## IT SOLUTIONS : IP TELEPHONY

### NBX® Communications Systems

Affordable telephony solutions for small/mid-sized businesses and remote offices.

A Better Way to Control Communications

Thousands of businesses like yours are discovering that there's a better way to handle communications. Since the world hasn't settled on a label for this kind of system yet, you've probably heard lots of names for it: LAN telephony, IP Telephony, Voice over IP, etc. Any Company facing outlays for telephone infrastructure should look at this technology. Compare vendors' offerings. Do the features offer you competitive advantage? Look at total costs over the life of the equipment, installation, service, and expansion costs.

With a 3Com NBX solution, you can combine your voice and data systems on a single network infrastructure. You save the overhead of having two separate Networks, and can take advantage of powerful new applications and many already built in. The award-winning NBX 100 solution delivers crystal-clear, toll-quality voice communications. It brings 10/100 Mbps performance to users work-tops, and is radically simple to use. It delivers the benefits of voice-over-IP (VoIP) and advanced voice messaging without the high costs and operational complexity of TDM PBX or proprietary IP systems.

### Features of the NBX Business Telephone:
